#### 6 Questions

# Comparing and Preferring Timetables

#### Belgian Infrastructure Management Company: Infrabel:

Compare 2 Timetables in terms of Expected Passenger Travel Time (includes: ride, dwell, transfer time and primary and secondary delays)

#### Note:

Including primary and secondary delays  $\Rightarrow$  evaluate efficiency & robustness

#### Specifics:

One Busy Day, Morning Peak Hour

#### Methodology

Graph Based

#### Result of Reflowing: Disc Area = Daily Flow

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Methodology

Evaluation Function for 4 Passenger Stream Types

#### In-Time and Over-Time

#### Table 1: In-Time and Over-Time Integrals when adding supplement $D_0$

	In-Time	Over-Time
probability	$\int_0^{D_0} p_a(x) dx$	$\int_{D_0}^{D_1} p_a(x) dx$
inc./dec. in $D_0$	inc.	dec.
expected time	$\int_0^{D_0} p_a(x) D_0 dx$	$\int_{D_0}^{D_1} p_a(x) D_1 dx$
inc./dec. in $D_0$	inc.	dec.
departing = ride' + dwell' + source		$\checkmark$
through = ride + dwell	$\checkmark$	
changing = ride + transfer	$\checkmark$	$\checkmark$
arriving = ride + sink	$\checkmark$

Evaluation Function for 4 Passenger Stream Types

### Cost curves of 4 Passenger Categories

#### Methodology

Evaluation Function for Secondary Delays: Expected Passenger Knock-On Time

# All Knock-On Costs for N(N - 1) Trains on Same Resource: Formula

$$\forall R : pKO_R = \sum_{\substack{i,j \in I_R \\ i \neq j}} f_j \cdot \frac{a_j e^{-a_i s_{i,j}}}{a_i(a_i + a_j)}.$$
 (1)

# Results for Hard Constraints: Realisability?

Table 2: Realisability. Reduction of the number and size of minimum runtime violations from timetable T1  $\rightarrow$  T2.

timetable distribution		# actions with a violation per size of violation in second					onds				
	6s	12s	18s	24s	30s	36s	42s	48s	56s	60s	66s
T1	320	219	126	93	24	27	3	6	1	3	1
T2	277	155	84	37	11	2	2	2			

Table 3: Realisability. Reduction of total and average violation from timetable T1  $\rightarrow$  T2.

timetable	weighted sum (s)	tot.#	avg. (s)
T1	11454	823	13.9
T2	6504	570	11.4

Practical Macroscopic Evaluation and Comparison of Railway Timetables Deterministic Results

# Results for Hard Constraints: Minimum Run Time Violations.

From run time check table:

- Both T1 and T2 have minimum run time violations.
- So are not realisable.
- T2 has fewer and smaller run time violations than T1.

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQ@

## Results for Hard Constraints: Headway Conflicts?

Figure 1: Planned headway supplements, in T1 and T2 of:  $T - 3' \le s < T$ , are problematic.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ ─臣 ─ のへで

# Results for Hard Constraints: Headway Conflicts.

From headway histograms:

• Both T1 and T2 have minimum headway time violations.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

• So are not feasible = not conflict-less.

#### Results in the Planned Train Time Domain

Figure 2: Increase of 9.71% f total planned train time from T1 to T2. All time units are in 6 second multiples.

# Results in the Planned Train Time Domain

Bargraphs show:  $T1 \rightarrow T2$ 

- more planned train minimum ride + dwell time:
  - due to some extra trains in T2 compared to T1,
  - effectiveness for passenger service of this is to be judged in expected passenger time domain.

- (relatively) more planned train ride + dwell supplement time:
  - efficiency versus robustness of this is to be judged in expected passenger time domain.

### Results in the Expected Passenger Time Domain

Figure 3: Reduction of 2.47% of total expected passenger time from T1 to T2. All time units are in 6 second multiples.

# Results in the Expected Passenger Time Domain

#### Bargraphs show: T1 $\rightarrow$ T2

- + less (expected) minimum ride + dwell time due to:
  - ${\scriptstyle \bullet}\,$  faster trains and/or
  - more effective direct connections (for big passenger OD pairs) (different line planning)
- ullet more expected ride + dwell supplement time  $\rightarrow$  less efficient
- $\bullet = \mathsf{similar} \ \mathsf{expected} \ \mathsf{knock-on} \ \mathsf{delay} \to \mathsf{similar} \ \mathsf{robustness}$
- + significantly reduced expected transfer time due to:
  more effective transfers (for big passenger OD pairs)
- $\bullet$  + overall reduction of 2.47% in expected passenger time
- + average probability of missing a transfer is reduced from 14.41% for T1 to 5.51% for T2.

# International Comparison

#### Table 4: Current Quality Levels of some European Railway Timetables

Level	realisable	conflictless	robust	resilient	Country
	no min.	no min.			
	run/dwell	headway			
	violations	violations			
feasible					
deterministic			stoc	hastic	
0					FR, IT, BE, DK
1	v				NL, UK
2	v	v			DE
3	v	v	v		CH, SE, <i>BE</i> ′*, <i>DK</i> ′*
4	v	v	v	v	

- All text in black above is due to [Goverde and Hansen(2013)]
- [Sels et al.(2015a)Sels, Cattrysse, and Vansteenwegen]
- [Sels et al.(2015b)Sels, Dewilde, Cattrysse, and Vansteenwegen]
- [Sels et al.(2015c)Sels, Dewilde, Cattrysse, and Vansteenwegen]
- \*Note: Our optimized timetables: BE',DK'are stable, have no 'macroscopic conflicts' and are robust.

# Conclusions

- practical method to evaluate and compare timetables
- objective = evaluation function = minimal expected passenger time

- $\bullet\,$  showed T1  $\rightarrow$  T2 reduction of 2.47% in exp. passenger. time
- evaluation reports on hard constraints, deterministic
  - realisability (ride & dwell & transfers)
  - conflict freeness (headways)
  - stability (cycles)
- evaluation reports on soft constraints, stochastic
  - efficiency
  - robustness
  - (resilience)

Practical Macroscopic Evaluation and Comparison of Railway Timetables Conclusions & Future Work

### Future Work

- evaluate over only real transfers ← data?
- vary parameter 'a' value: 1% .. 5%
- add parameter 'r'
  - $\bullet\,$  r% of passengers benefit from temporal spreading of trains

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <
